

Are you interested in how your child learns language?

So are we!

Looking for children ages 4-7

What is involved? We will play fun computer games with your child, while we observe your child's brain with the MRI. MRI is a large magnet that records brain activity. MRI is absolutely safe for children, and a fun learning experience for the participants and their families!

Why participate? Your child will have fun playing the games and watching cartoons, and will receive gifts, including a set of his or her own brain pictures, a gift certificate to a local bookstore, several small, educational prizes, and the merits of being a "young scientist"!

Your help will be invaluable to families and scientists interested in reading, language and cognitive development, early diagnosis of learning disabilities and improvement of teaching methods.

Where? MIT campus in Cambridge (a short walk from Kendall/MIT red line T-stop). We provide free parking.

When? At your convenience, weekdays or weekends.

How to participate? Contact us at 617-324-5116, or email kidsbrains@gmail.com.

More Information: This investigation is conducted at MIT by Professor John Gabrieli.
